

In the personal data visualization project, I aim to show my energy and happiness changes in everyday life. The unity project have 4 scenes, with first scene showing the energy and happiness when I wake up in the morning, second scene showing the energy and happiness changes when I go to catch the bus in the morning, third scene showing the energy and happiness changes during the time of working, and fourth scene showing the energy and happiness when I go back to my home at night. All the energy and happiness data is the scale out of 100 and is shown in the format of a bar, and as time goes, the bar changes. Plus, in the third scene, the data during work time is also shown in a 3D chart with x axis the time and y axis the energy and happiness data.
